This should not be taken as a complete list - use it as a guide only.

## 1 Useful Maths Equations

There is an easy way to remember the pattern for values of $\sin \theta, \cos \theta$ and $\tan \theta$ which you should know. Notice how the number under the square root starts at zero (for sin) and goes up by one each time. The pattern for $\cos$ is reversed. The values for tan are found by remembering $\tan \theta=\frac{\sin \theta}{\cos \theta}$.

| $\theta$ | 0 | 30 | 45 | 60 | 90 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\sin \theta$ | $\frac{\sqrt{ } 0}{2}=0$ | $\frac{\sqrt{1}}{2}=\frac{1}{2}$ | $\frac{\sqrt{2}}{2}=\frac{1}{\sqrt{2}}$ | $\frac{\sqrt{3}}{2}$ | $\frac{\sqrt{4}}{2}=1$ |
| $\cos \theta$ | $\frac{\sqrt{4}}{2}=1$ | $\frac{\sqrt{3}}{2}$ | $\frac{\sqrt{2}}{2}=\frac{1}{\sqrt{2}}$ | $\frac{\sqrt{1}}{2}=\frac{1}{2}$ | $\frac{\sqrt{0}}{2}=0$ |
| $\tan \theta$ | $\frac{0}{1}=0$ | $\frac{1 \times 2}{2 \sqrt{3}}=\frac{1}{\sqrt{3}}$ | $\frac{\sqrt{2}}{\sqrt{2}}$ | $\frac{2 \sqrt{3}}{2 \times 1}=\sqrt{3}$ | $\infty$ |

Trig identities:

$$
\begin{gather*}
\sin ^{2} \theta+\cos ^{2} \theta=1  \tag{1}\\
\tan \theta=\frac{\sin \theta}{\cos \theta}  \tag{2}\\
\sin 2 \theta=2 \sin \theta \cos \theta  \tag{3}\\
\begin{aligned}
\cos 2 \theta & =\cos ^{2} \theta-\sin ^{2} \theta \\
& =2 \cos ^{2} \theta-1 \\
= & 1-2 \sin ^{2} \theta
\end{aligned} \tag{4}
\end{gather*}
$$

Maclaurin Series

$$
\begin{align*}
& \sin x=x-\frac{x^{3}}{3!}+\frac{x^{5}}{5!}  \tag{7}\\
& \cos x=1-\frac{x^{2}}{2!}+\frac{x^{4}}{4!} \tag{8}
\end{align*}
$$

Quadratic Formula solutions of $a x^{2}+b x+c=0$

$$
\begin{equation*}
x=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a} \tag{9}
\end{equation*}
$$

The binomial expansion:

$$
\begin{equation*}
(1+x)^{n}=1+n x+\frac{n(n-1)}{2!} x^{2}+\ldots+\frac{n(n-1) \ldots(n-r+1)}{r!} x^{r}+\ldots+x^{n} \tag{10}
\end{equation*}
$$

Integration by parts

$$
\begin{equation*}
\int u d v=u v-\int v d u \tag{11}
\end{equation*}
$$

Logs

$$
\begin{align*}
x & =b^{y}  \tag{12}\\
y & =\log _{b} x  \tag{13}\\
\log x+\log y & =\log x y  \tag{14}\\
\log x-\log y & =\log \frac{x}{y}  \tag{15}\\
\log _{b} a & =\frac{\log _{c} a}{\log _{c} b} \tag{16}
\end{align*}
$$

Angles in a triangle:

$$
\begin{align*}
& \frac{a}{\sin A}=\frac{b}{\sin B}=\frac{c}{\sin C}  \tag{17}\\
& a^{2}=b^{2}+c^{2}-2 b c \cos A \tag{18}
\end{align*}
$$

Area of a Triangle:

$$
\begin{equation*}
A=\frac{1}{2} a b \sin C \tag{19}
\end{equation*}
$$

Equation of a circle with centre ( $\mathrm{a}, \mathrm{b}$ ) and radius r

$$
\begin{equation*}
(x-a)^{2}+(y-b)^{2}=r^{2} \tag{20}
\end{equation*}
$$

Area of sector a circle

$$
\begin{equation*}
A=\frac{1}{2} r^{2} \theta \tag{21}
\end{equation*}
$$

Arithmetic Series

$$
\begin{equation*}
S_{n}=\frac{1}{2} n(a+l)=\frac{1}{2} n[2 a+(n-1) d] \tag{22}
\end{equation*}
$$

Geometric Series

$$
\begin{gather*}
S_{n}=\frac{a\left(1-r^{n}\right)}{1-r}  \tag{23}\\
S_{\infty}=\frac{a}{1-r} \tag{24}
\end{gather*}
$$

## 2 Useful Physics Equations

$$
\begin{equation*}
E=m c \theta \tag{25}
\end{equation*}
$$

Where E is energy ( J ), m is mass $(\mathrm{kg})$, c is specific heat capacity ( $4200 \mathrm{Jkg}^{-1} \mathrm{~K}^{-1}$ ) and $\theta$ is change in temperature $(\mathrm{K})$.

$$
\begin{equation*}
E=P t \tag{26}
\end{equation*}
$$

Where E is energy $(\mathrm{J}), \mathrm{P}$ is power $(\mathrm{W})$ and t is time ( s ).

$$
\begin{equation*}
P=F v \tag{27}
\end{equation*}
$$

Where P is power $(\mathrm{W}), \mathrm{F}$ is force $(\mathrm{N})$ and v is velocity $(\mathrm{m} / \mathrm{s})$.

$$
\begin{equation*}
v=f \lambda \tag{28}
\end{equation*}
$$

Where $v$ is wave speed $(\mathrm{m} / \mathrm{s})$, f is frequency $(\mathrm{Hz})$ and $\lambda$ is wavelength (m).

$$
\begin{equation*}
F=m a \tag{29}
\end{equation*}
$$

Where F is force $(\mathrm{N}), \mathrm{m}$ is mass $(\mathrm{kg})$ and a is acceleration $\left(\mathrm{m} / \mathrm{s}^{2}\right)$.

$$
\begin{equation*}
a=\frac{v-u}{t} \tag{30}
\end{equation*}
$$

Where $a$ is acceleration $\left(m / s^{2}\right)$, $v$ is final velocity $(\mathrm{m} / \mathrm{s}), \mathrm{u}$ is initial velocity $(\mathrm{m} / \mathrm{s})$ and t is time ( s ).

$$
\begin{equation*}
W=m g \tag{31}
\end{equation*}
$$

Where W is weight $(\mathrm{N}), \mathrm{m}$ is mass $(\mathrm{kg})$ and g is $9.81 \mathrm{~m} / \mathrm{s}^{2}$.

$$
\begin{equation*}
F=k x \tag{32}
\end{equation*}
$$

Where F is force $(\mathrm{N}), \mathrm{k}$ is the spring constant $(\mathrm{N} / \mathrm{m})$ and x is extension (m).

$$
\begin{equation*}
E=\frac{1}{2} F x=\frac{1}{2} k x^{2} \tag{33}
\end{equation*}
$$

Where E in the energy stored in a spring (J), F is the force (N) and $x$ is the extension (m).

$$
\begin{equation*}
W=F d \tag{34}
\end{equation*}
$$

Where W is the work done ( J ), F is the force ( N ) and d is the distance moved in the direction of the force (m).

$$
\begin{equation*}
E=m g h \tag{35}
\end{equation*}
$$

Where $E$ is the gravitational potential energy $(J), m$ is the mass $(\mathrm{kg}), \mathrm{g}$ is $9.81 \mathrm{~m} / \mathrm{s}^{2}$

$$
\begin{equation*}
E=\frac{1}{2} m v^{2} \tag{36}
\end{equation*}
$$

Where E is the kinetic energy $(\mathrm{J}), \mathrm{m}$ is the mass $(\mathrm{kg})$ and v is the velocity (m/s).

$$
\begin{equation*}
p=m v \tag{37}
\end{equation*}
$$

Where p is momentum $(\mathrm{kgm} / \mathrm{s})$, m is the mass $(\mathrm{kg})$ and v is the velocity (m/s).

$$
\begin{equation*}
Q=I t \tag{38}
\end{equation*}
$$

Where Q is the electric charge (C), I is the current (A) and t is the time ( s ).

$$
\begin{equation*}
W=Q V \tag{39}
\end{equation*}
$$

Where W is the work done $(\mathrm{J}), \mathrm{Q}$ is the electric charge $(\mathrm{C})$ and V is the potential difference (V).

$$
\begin{equation*}
V=I R \tag{40}
\end{equation*}
$$

Where V is the potential difference $(\mathrm{V})$, I is the current $(\mathrm{A})$ and R is the resistance ( $\Omega$ ).

$$
\begin{equation*}
P=I V=I^{2} R=\frac{V^{2}}{R} \tag{41}
\end{equation*}
$$

Where P is the power (W), I is the current (A), R is the resistance $(\Omega)$ and V is the potential difference $(\mathrm{V})$.

$$
\begin{equation*}
v=\frac{d}{t} \tag{42}
\end{equation*}
$$

Where v is the velocity $(\mathrm{m} / \mathrm{s}), \mathrm{d}$ is the distance ( m ) and t is the time ( s ).

$$
\begin{equation*}
f=\frac{1}{T} \tag{43}
\end{equation*}
$$

Where f is the frequency $(\mathrm{Hz})$ and T is the time period $(\mathrm{s})$.

$$
\begin{equation*}
M=F d \tag{44}
\end{equation*}
$$

Where M is the moment $(\mathrm{Nm}), \mathrm{F}$ is the force $(\mathrm{N})$ and d is the perpendicular distance (m).

$$
\begin{equation*}
P=\frac{F}{A} \tag{45}
\end{equation*}
$$

Where P is the pressure $(\mathrm{Pa}), \mathrm{F}$ is the force $(\mathrm{N})$ and A is the area $\left(\mathrm{m}^{2}\right)$.

$$
\begin{equation*}
\frac{V_{p}}{V_{s}}=\frac{N_{p}}{N_{s}} \tag{46}
\end{equation*}
$$

Where $V_{p}$ is the voltage across the primary coil of a transformer, $V_{s}$ is the voltage across the secondary coil, $N_{p}$ is the number of turns on the primary coil and $N_{s}$ is the number of turns on the secondary coil.

$$
\begin{align*}
s & =u t+\frac{1}{2} a t^{2}  \tag{47}\\
s & =\frac{u+v}{2} \times t  \tag{48}\\
v & =u+a t  \tag{49}\\
v^{2} & =u^{2}+2 a s \tag{50}
\end{align*}
$$

Where $s$ is the distance $(\mathrm{m}), \mathrm{u}$ is the initial velocity $(\mathrm{m} / \mathrm{s}), \mathrm{v}$ is the final velocity ( $\mathrm{m} / \mathrm{s}$ ), a is the acceleration $\left(\mathrm{m} / \mathrm{s}^{2}\right)$ and t is the time ( s ).

$$
\begin{equation*}
R=\frac{\rho L}{A} \tag{51}
\end{equation*}
$$

R is resistance $(\Omega), \rho$ is the resistivity $(\Omega m), \mathrm{L}$ is the length (m) and A is the area $\left(\mathrm{m}^{2}\right)$.

$$
\begin{equation*}
\rho=\frac{m}{V} \tag{52}
\end{equation*}
$$

Where $\rho$ is the density $\left(\mathrm{kgm}^{-3}\right)$, m is the mass $(\mathrm{kg})$ and V is the volume $\left(\mathrm{m}^{3}\right)$.

$$
\begin{equation*}
n \lambda=d \sin \theta \tag{53}
\end{equation*}
$$

Where n is the order, $\lambda$ is the wavelength (m), d is the slit width (m) and $\theta$ is the angle of the maxima in degrees.

$$
\begin{equation*}
\lambda=\frac{d x}{L} \tag{54}
\end{equation*}
$$

Where $\lambda$ is the wavelength ( m ), d is the slit width ( m ), x is the fringe spacing $(\mathrm{m})$, and L is the distance from the slits to the screen (m).

$$
\begin{equation*}
E=m c^{2} \tag{55}
\end{equation*}
$$

Where E is the energy $(\mathrm{J}), \mathrm{m}$ is the mass $(\mathrm{kg})$ and c is the speed of light $\left(3 \times 10^{8} \mathrm{~m} / \mathrm{s}\right)$.

$$
\begin{equation*}
E=h f \tag{56}
\end{equation*}
$$

Where E is the energy $(\mathrm{J}), \mathrm{h}$ is Planc's constant $\left(6.63 \times 10^{-34} \mathrm{Js}\right)$ and f is the frequency (Hz).

$$
\begin{equation*}
\lambda=\frac{h}{p} \tag{57}
\end{equation*}
$$

Where $\lambda$ is the wavelength (m), h is Planc's constant $\left(6.63 \times 10^{-34} J s\right)$ and p is the momentum $(\mathrm{kgm} / \mathrm{s})$.

$$
\begin{equation*}
P V=n R T \tag{58}
\end{equation*}
$$

Where P is the pressure ( Pa ), V is the volume $\left(\mathrm{m}^{3}\right), \mathrm{n}$ is the number of moles, R is the gas constant ( $8.31 \mathrm{Jmol}^{-1} \mathrm{~K}^{-1}$ ) and T is the temperature ( K ).

$$
\begin{equation*}
a=\frac{v^{2}}{r} \tag{59}
\end{equation*}
$$

Where a is the acceleration in a circle $\left(\mathrm{m} / \mathrm{s}^{2}\right)$, v is the velocity $(\mathrm{m} / \mathrm{s})$ and r is radius (m).

$$
\begin{equation*}
v=\omega r \tag{60}
\end{equation*}
$$

Where v is the velocity $(\mathrm{m} / \mathrm{s}), \omega$ is the angular velocity ( $\mathrm{rad} / \mathrm{s}$ ) and r is radius (m).

$$
\begin{equation*}
F=\frac{m v^{2}}{r} \tag{61}
\end{equation*}
$$

Where F is the force $(\mathrm{N}), \mathrm{m}$ is the mass $(\mathrm{kg}), \mathrm{v}$ is the velocity $(\mathrm{m} / \mathrm{s})$ and r is radius (m).

$$
\begin{equation*}
F=\frac{G M m}{r^{2}} \tag{62}
\end{equation*}
$$

Where F is the gravitational force $(\mathrm{N}), \mathrm{G}$ is the gravitational constant ( $6.67 \times$ $10^{-11} \mathrm{Nm}^{2} \mathrm{~kg}^{-2}$ ), M is the mass $(\mathrm{kg}), \mathrm{m}$ is the other mass $(\mathrm{kg})$ and r is the distance between the masses (m).
